

LYME DISEASE PROTOCOL

NOTE: This Protocol must be followed **exactly as written**. Any deviation may result in a possible failure.

NOTE: For Chronic long-term Lyme Disease, this Protocol may have to be followed for 3-9 months.

NOTE: Invive Silver 5000 ppm is the only silver Empirically proven to substantiate this protocol.

Dr. Burgdorfer the discoverer of Lyme Disease for whom the spirochete was named after as *Borellia Burgdorferi*, recommended INVIVE Silver against Lyme Disease at a conference in Vancouver, Canada over 20 years ago.

Over 500 M.D.s were at that conference, and Dr. Burgdorfer's recommendations were and have been ignored to this day. The Doctors did "NOT" discount the MSP (Mild Silver Protein) Silver, but claimed/told Dr. Burgdorfer that they had better and more targeted drugs. To which Dr. Burgdorfer replied: Your supposed better and targeted drugs have resulted in/caused the pathogenic mutated nightmare world of today, because silver kills the pathogens instantly and completely, and silver does not allow the pathogens to mutate, while your drugs CAUSE mutations by allowing pathogens to survive though wounded, and thereby mutate and develop resistance to your drugs, causing drug resistant strains. E.g.: MRSA Methicillin-aminoglycoside resistant *Staphylococcus aureus*, MRSA An organism with multiple antibiotic resistances—E.g.: aminoglycosides, chloramphenicol, clindamycin, erythromycin, rifampin, tetracycline, streptomycin, cephalosporin.

We wouldn't have this abx (antibiotic) resistant nightmare world, if the FDA had not taken away the silver from us, when biased clerks at the FDA in 1938 took control of/took over our Food and Drug Supply.

Silver **5000** ppm

1. 5 cc per 30 lbs. bodyweight is the daily total dosage, and is the "target dosage".
2. There are 5 cc in a measuring teaspoon.
3. A 120 lb. person would take 120 lbs. divided by 30 lbs.= 4 teaspoons per day
4. It is taken in 4 divided doses. Which means 1 tsp. every 6 hours.
5. You may use a measuring teaspoon which is 5 cc, (do not use unknown serving teaspoons). But:
6. Inside the Silver Cannister that the Silver Bottle arrives in, there is a Medical Graduated 1 ounce measuring cup for Medical Purposes graduated in cc and ml.
7. Store the silver bottle in its cannister always, and keep it in a dark cupboard out of the light, because it is light sensitive like photographic film, and will be stressed by light.
8. It can be boiled or frozen, BUT not exposed to light for over 1 minute when taken from its bottle.
9. There are 118.291 cc/ml (round to 120 as extra is put in each bottle) = 4 oz. fl. U.S. in each bottle.
10. For a 120 lb. person take 4 teaspoons in total daily (per 24 hours) as a minimum dosage.

11. Do NOT swallow. Hold silver **sublingually** under your tongue for 120 seconds. So that the silver **will go into your bloodstream like an IV** the same as a Nitroglycerin pill does to stop a heart attack.
12. After 120 seconds: Gently swallow slowly the secretions of the mouth. After 120 seconds “slowly” swallow to allow further absorption via your esophagus. Do NOT expiate/spit out the silver. Therefore, swallow slowly any remaining after 120 seconds.
13. **Maintain a “Steady State” of Silver in your bloodstream** by taking 5 cc every 6 hours, as this is necessary to kill the spirochetes every time they come out in the bloodstream from a sequestered area.
14. We can **reach the sequestered areas that the spirochetes hide in**, due to coating with protein of the silver particle, with said coating slowly washing off like a time release, then releasing the silver ions, thus allowing this INVIVE silver to reach the sequestered areas of where the spirochetes are hiding. This coating provides a time release methodology for eradication of the spirochetes in sequestered areas.
15. **A Hot Bath for 40 minutes** in the bathtub at 104 degrees, is mandatory.
16. **Purchase a \$9 indoor/outdoor cord probe thermometer** https://www.amazon.com/iKKEGOL-Display-Outdoor-Thermometer-Hygrometer/dp/B00DXY960A/ref=sr_1_66?crid=1GT0JB307YESO&keywords=indoor%2Boutdoor%2Bthermometer&qid=1653616692&sprefix=indoor%2Boutdoor%2Bthermometer%2Caps%2C102&sr=8-66&th=1
17. The hot **104-degree F.** water expands the tiny capillary blood vessels, allowing silver to reach tissue areas where the Lyme spirochete is sequestered and hard to eradicate.
18. **Stay in tub for 40 minutes** (without adding more hot water to heat up the tub) as this allows the water to cool down to 94 degrees F., so that you do not sweat when you get out of tub. Read a book, or meditate etc., to maximize benefit by your time in the tub.

IMPORTANT:

- **20 minutes “before” tub bath, imbibe/drink 4oz of** citric juice, either **orange or grapefruit juice** —this allows the silver nano particles to cross over the blood brain barrier in case there is neurological involvement and inflammation which there usually is.
- **1 minute before getting in tub, take a dosage of 5 cc of silver.**

Additional Facts:

Must drink ½ of your body weight of **Distilled** Water in total DAILY, to prevent a “possible” Jarisch-**Herxheimer** reaction due to the release of toxins from the dying spirochetes.

19. All humans should imbibe/drink ½ their weight in ounces of water every day, even if they do not have Lyme Disease. We are all dehydrated, and should be taught better.
20. Treat until asymptomatic
21. Then without pause, treat 1 more month to make sure that you have eradicated all the spirochetes.

Wholesale Cost of Silver **5000 ppm:**

\$539.94 monthly per 6 pack of 4 oz. Bottles- 24 teaspoons in one 4 oz, bottle = 1 Bottle lasts 6 days.

The 6 pack SAVES you \$10.00 per Bottle.

6 days per bottle divided into 30-31 days in a month= 5+ Bottles per month= 6 pack.

INVIVE does not sell by the gallon because you want more silver and not more water. All bottles are 4 oz. fl. U.S.. We add more silver to the bottles as their strength increases, not more water.

And you do NOT want to be drinking gallons of silver water because then it has to go into your stomach instead of being absorbed sublingually under your tongue like and I.V. And going into your stomach means poor absorption and the triggering of all kinds of digestive problems by killing the friendly bacterium.

The good news is that you save \$60.00 when you purchase the 6 pack.

This was done to help you achieve the correct dosage. (Some silver is better than no silver at all, therefore purchase the highest 6 pack strength that you can afford). (10,700 ppm works faster than 5000 ppm). To order see <https://invive.com/#allstr>

The strengths used successfully for 100+ years were:

A 10% solution (from the Mother Solution of 20,000 ppm) = 2000 ppm as a minimum ppm, and:

A 50% solution (from the Mother Solution of 20,000 ppm) = which is 10,000 ppm.

The 5000 ppm is the most cost EFFECTIVE.

N.B. (IMPORTANT):

You must treat for a minimum of 3 months re Lyme Disease, which means you must follow the Protocol.
